

6 Ways You Can Save Money on Prescriptions

Rx Savings Solutions (RxSS) can help lower your medication costs.

We find all the prescription options for your conditions. You and your doctor decide what's best for your health and budget.

Here are the six most common ways people save money using RxSS:

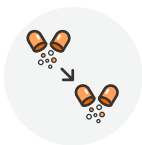

Different Drug, Same Treatment

There is usually more than one medication available to treat a medical condition. We'll show you all of them, along with their costs.

Same Drug, Different Form

The same drug can come in different forms. A capsule might cost more than a tablet, or a gel may cost more than a lotion.

Same Active Ingredient, Lower Price

If a generic is available, we'll find it. Get the same treatment without the cost of a brand name.

Same Drug, Split in Half

Many medications are priced the same regardless of strength. Split a larger dose in half to get two for the price of one.

Same Drug, Different Pharmacy

Sometimes it's as simple as getting a lower cost for your medication at another pharmacy. Check prices before your next fill.

Same Ingredients, Different Pills

Some drugs have two active ingredients and a big price. Take them separately at the same time for a lower cost.
